Reason For Exam

CHRONIC COUGH WITH PURULENT SPUTUM, WEIGHT LOSS

REPORT

CT CHEST WITH IV CONTRAST:

ADDITIONAL HISTORY: None.

COMPARISON: None.

TECHNIQUE: Images of the chest were obtained from the thoracic inlet through the upper abdomen during IV contrast administration.

CONTRAST: 100 cc of Omnipaque 300 was administered intravenously.

Lungs: No pulmonary infiltrates, pleural effusions or pulmonary nodules are seen. There is lingula scarring and mild bronchiectatic change. There is scarring and bronchiectasis in the right upper, right middle and right lower lobes. There is biapical pleural thickening. Mediastinum and hilar structures: No axillary, mediastinal or hilar lymphadenopathy is seen. The heart is prominent. There is a 3.5-cm prominent ascending aorta.
Upper abdomen: The visualized portions are unremarkable.
Bones: No acute bony abnormality.

IMPRESSION: Bilateral scarring and bronchiectasis. No mass is identified. Six month follow-up chest CT is suggested to ensure stability.
